# TICKETING SYSTEM

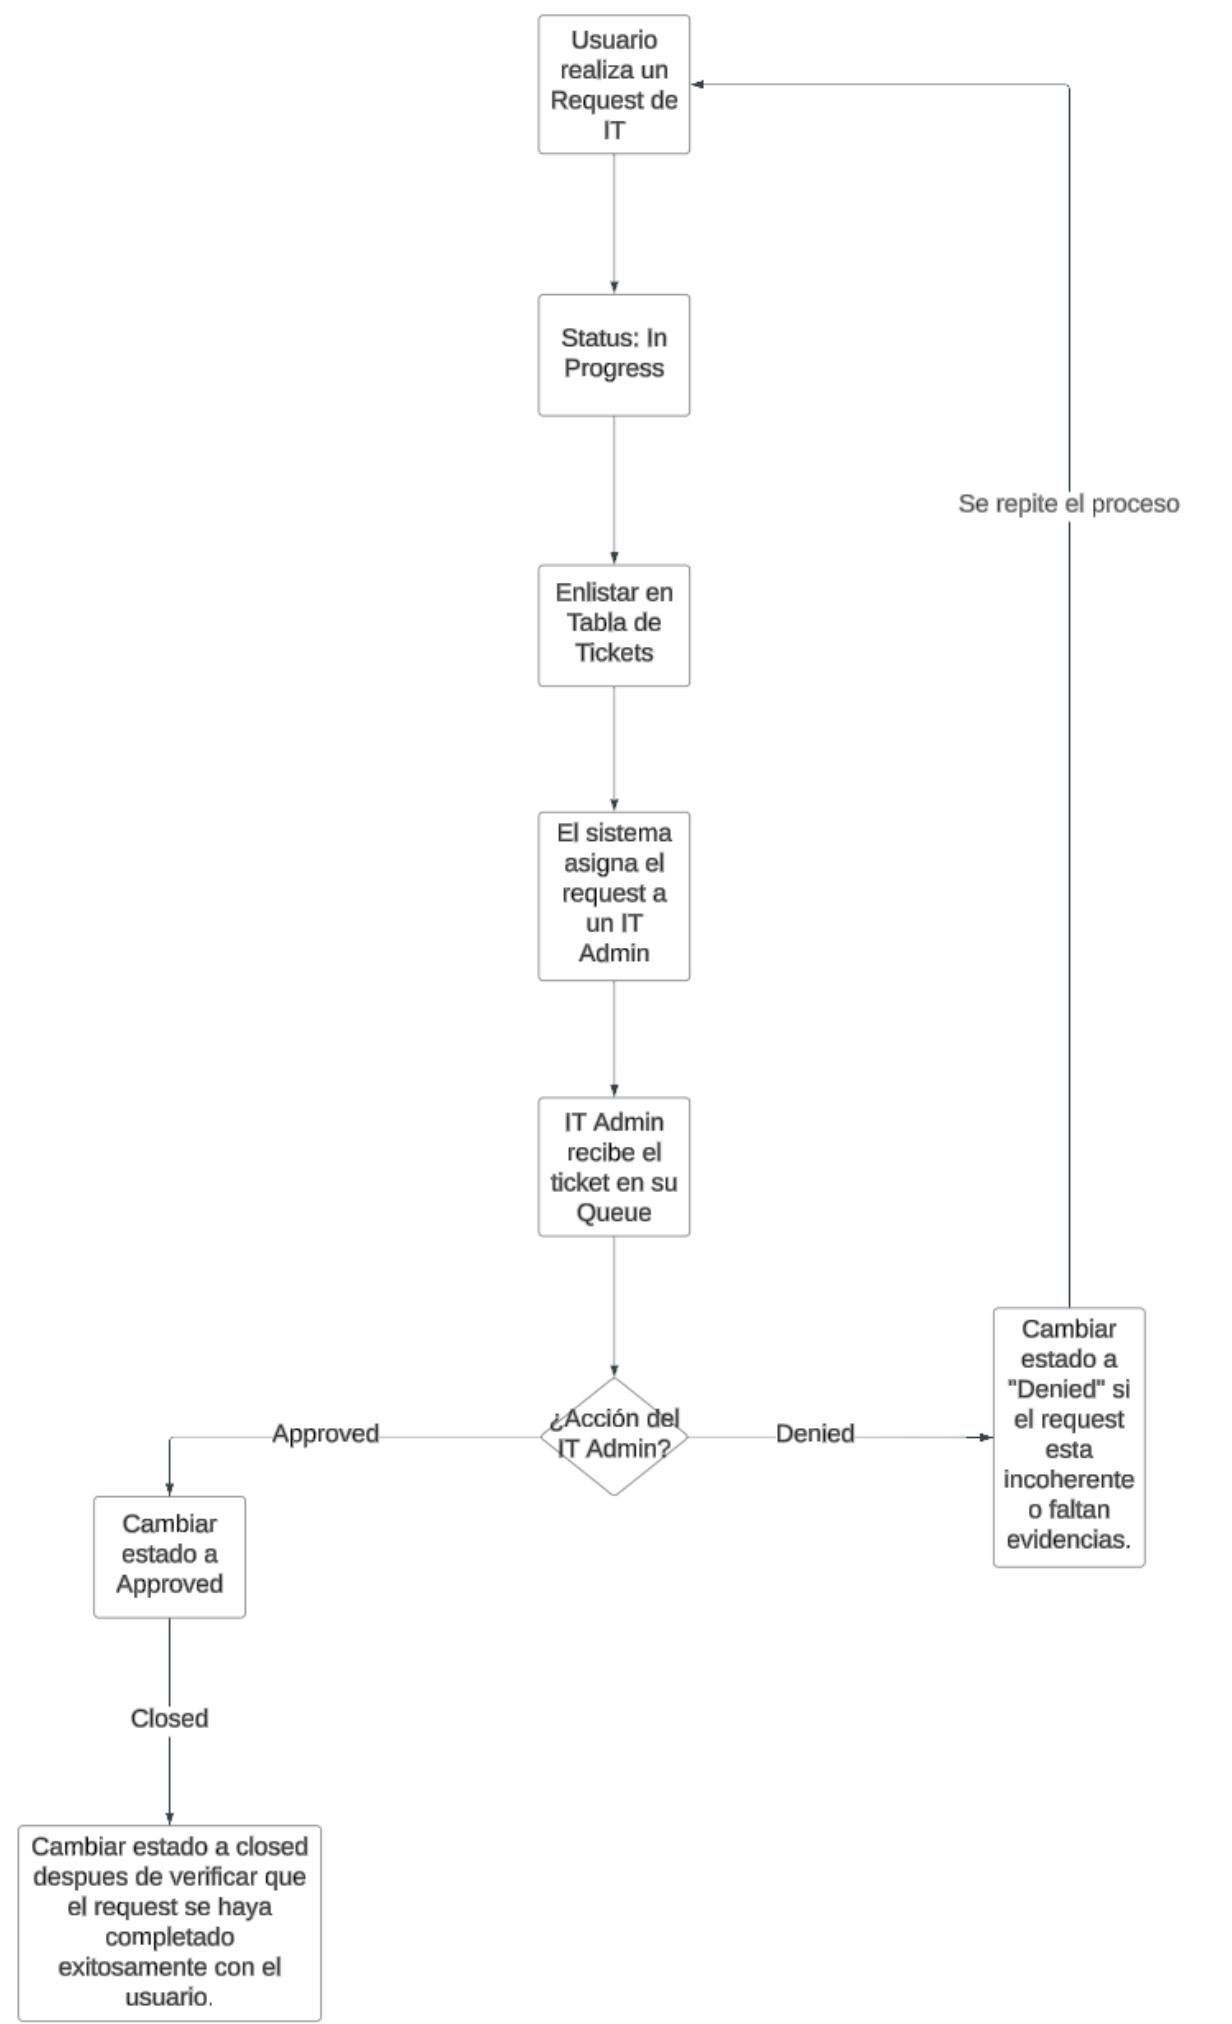

A screenshot of a computer screen showing a code editor with a large amount of Ruby code. The code appears to be a test suite for a ticketing system, using the RSpec framework. It includes require statements for 'spec\_helper', 'rspec/rails', 'capybara/rspec', and 'capybara/rails'. It also includes configuration for Capybara, database truncation prevention, and test frameworks. The code is written in a dark-themed code editor.
